

The Atlanta University Center(AUC) Consortium, Data Science Initiative, Beginner Python Academy

Dr.Erdi Kara, Spelman College, Mathematics,
(May 19-20, 23-24, ThFMT:, 9:00 am-4:00 pm ET)

Most in-demand programming languages of 2022

Based on LinkedIn job postings in the USA & Europe

Workshop Outline

1. Python Basics
2. Essential Python Modules for Data Science
 - a. Numpy: arrays
 - b. Matplotlib: visualization
 - c. Pandas: data analysis
 - d. Fun Projects!
3. Introduction to Machine Learning with Python(probably no time for this (:)

General Overview

- Assuming no prior knowledge.
- Data science oriented context.
- Don't get stuck in tutorial purgatory...
- 50 mins lecture + 10 mins break
- Three small size capstone projects

Day-1: Python Basics

- 1) How to Python
 - a) Use Python shell/editor
 - b) Run from a file
 - c) **Use Jupyter notebook**
- 2) Fundamental Data Structures
- 3) Control Flows, Functions
- 4) Interacting with Python modules

Day-2

- **Numpy**: Numerical Python
- **Matplotlib**: Data Visualization

Day-3

- **Pandas:** data analysis library
- **Seaborn:** advanced visualization library built on top of matplotlib.

Day-4: Pandas Projects and More

1. Pandas Projects

- a. Smoking is bad for you!
- b. What can we learn from our own Netflix Data?
- c. Which people had a better survival chance in Titanic?

2. Assignment Discussion

3. Closing Remarks

- a. Use Python Locally
- b. Set-up your GIT profile
